About Us

TechShield Cyber Solution is a rapidly growing cyber security service and solution provider that provides Vulnerability Assessment and Penetration Testing (VAPT Audit), Information Security (IS/EDP) Audit, IT Consulting, Assessment and Consultancy, Manage Security Services, Risk Management, and Cyber Security Awareness Training.

We at TechShield Cyber Solution assist organisations in understanding their cyber security posture, cyber resilience, and incident management through customised information security audits that include penetration testing, assessment, mapping, and exploitation of vulnerabilities, risk assessment, review and assessment of security policies, malware/backdoor detection, and so on. We support and provide corporate trainings, IT security policy formulations, and to assist organisations in controlling threats from within and outside the organisation, as well as assuring concurrent compliance with numerous global standardisations and regulatory regulations.

Our Mission

Our goal is to take the lead in the cyber security services market.

Our dedication lies in our ongoing pursuit knowledge and innovation.

Our Vision

To offer reliable, qualified professional services and solutions in the areas of IT security audit, cyber security audit, awareness, and training programs so that people are made aware of new cyber threats and develop an enhanced understanding of the need to prevent, detect, and take action against cybercrime.

We specialize in a range of IT audit parameters, such as network diagramming, vulnerability assessment, exploiting vulnerabilities, penetration testing, application security assessment, review and assessment of security policies and controls in accordance with best practices, incident response, malware detection, log review, and so on, in accordance with the requirements for IT Security Audit & Assurance by CERT-In and RBI

Used For VAPT Audit

Virtual CISO Service (vCISO)

'Security As a Service' that is hands-on and fully supported, tailored for businesses that need access to experienced cyber security, governance, risk, and compliance professionals.

Typical objectives of vCISO engagements include:

- »» Information security leadership and guidance
- »» Steering committee leadership or participation
- »» Security compliance management
- »» Security policy, process, and procedure development
- »» Incident response planning
- »» Security training and awareness
- »» Board and executive leadership presentations
- »» Security assessment
- »» Internal audit
- »» Vulnerability assessments
- »» Risk assessment and much, much more.

Security Operation Center (SOC 24*7)

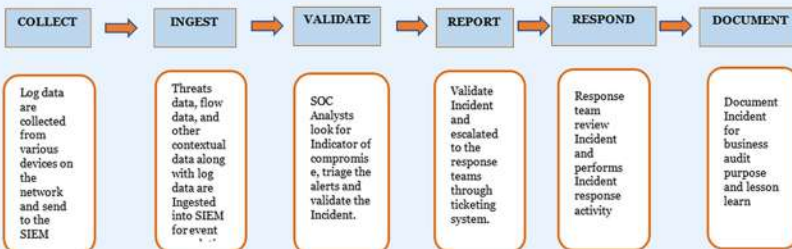

The function of the security operations center (SOC) is to monitor, prevent, detect, investigate, and respond to cyber threats around the clock. SOC teams are charged with monitoring and protecting the organization's assets including intellectual property, personnel data, business systems, and brand integrity. The SOC team implements the organization's overall cyber security strategy and acts as the central point of collaboration in coordinated efforts to monitor, assess, and defend against cyber-attacks.

The basic responsibilities of a SOC team include the following:

- Asset discovery and management
- Continuous behavioral monitoring (24*7)
- Keeping activity logs
- Alert severity ranking
- Defense development and evolution
- Incident recovery
- Compliance maintenance

Workflow of Security Operation center:
